# TotalCompliance Cloud

Your HIPAA Managed Cloud

What is TotalCompliance?

Healthcare innovators and organizations leverage TotalCompliance as a Managed HIPAA Cloud in order to achieve compliance in AWS and get-to-market faster. TotalCompliance enables organizations to build in AWS while managing regulatory compliance without sacrificing on product development and go-to-market initiatives.

TotalCompliance streamlines HIPAA Compliance by providing teams with:

Complete AWS Account Security and Compliance Configuration

TotalCompliance provides organizations with a security hardened AWS account designed to meet HIPAA/HITECH standards. TotalCompliance sets up all required HIPAA security safeguards including audit logging, backup and disaster recovery, and firewall/networking.

Creation of HIPAA Policies

TotalCompliance also provides healthcare companies and organizations with a set of standard HIPAA administrative policies. These policies are built around your organization structure and the established cloud security architecture provided by TotalCompliance. Policies include:

- System Access Policy
- Configuration Management Policy
- Auditing Policy
- Roles Policy
- Employee Training Policy
- Breach Policy

Monitoring and Management of Cloud Compliance Concerns

After configuring your AWS cloud environment and policies, TotalCompliance monitors your AWS cloud account for security and compliance concerns and manages HIPAA security configuration for your cloud services. Your organization can focus on product development, while our team can focus on managing your cloud infrastructure.

Save Time. Save Money.

Rather than stitching together in-house or consulting expertise, a full suite of DevOps and security products as well as the necessary infrastructure and DevOps team, TotalCompliance allows organizations to refocus on building good product and delivering that product to market. Purpose-built for healthcare innovators, TotalCompliance allows for vendors and technology companies to commercialize products in healthcare at unprecedented speed.

Compliance Features Overview:

Secure Hosting

- VPC, Firewall and Subnet configuration
- Hardened security groups and locked down port access
- Role-based user access control with IAM
- VPN for secure data communication.

Backup/Disaster Recovery

- EC2/EBS volume snapshots
- S3 backup / redundancy / archival.
- Annual disaster recovery exercise.

Vulnerability Management & System Patching

- Vulnerability scanning for Common Vulnerabilities and Exposures (CVE), Center for Internet Security (CIS) benchmarks, Security Best Practices and Runtime Behavior Analysis.
- Automated patching and Compliance reporting.

Audit Logging & Monitoring

- AWS Account-level log collection via CloudTrail
- Central application logging/monitoring.
- Central threat & anomaly detection.

Build HIPAA Compliant Applications.
